

Customer Visit Report

MM-IN-RD-9100-P06-04

Rev: 1

Customer : Cyntec China		Prepared by : Siva	Date : 19/Apr/2012	Time : 10:00am
Participant From Maruwa		Participant From Organizer	Report To	
1. Mr Ogawa	MMSB - MD	1. Mr Jeff Wang	Purchasing Manager	1. Mr. Anthony EA
2. Mr Takimoto	Sales - Manager	2.		2. Mr. Ogawa MD
3. Mr Izumo	JP Substrate - M	3.		3. Mr. Seenii, Mr. Naga GM
4. Mr Eric	Sales	4.		4. Mr. Sinna, Mr. Sukenari Production
5. Mr Siva	MMSB Subs QA	5.		5. TOP Management

Agenda

1. Meeting was only joint by the Purchasing Manager
2. Mr Jeff asked about the claim status and I have explained to him that we only receive the sample on the 18th Apr and yet to be measure and confirm on the cause of occurance.
The cause either will be due to Ranking Machine or mould control
3. There is another claim from Cyntec for BYA crack. This claim was issued in month of Mar'12 but info only given on 17/04 to MMSB. Commitment date for both 8D submission is as below

Claim No	Details	Report submission date	PIC
QC 120304	BYA Crack	24th Apr 2012	Mr Arif
QC 120401	CTC Dimension	24th Apr 2012	Mr Arif

4. There no other quality matters discussed or highlighted by Mr Jeff
5. Discussion topic have been changed to quantity discussion
Generally the BYA order quantity for month of May'12 ~ July'12 being highlighted.

May'12 140K
Jun'12 190K
July'12 210K

Other market status being discussed by Mr Ogawa & Mr Takimoto

Meeting adjourned at 11.30am

Conclusion & Opinion

1. Weakness saw at the QA communication flow between sales office and Japan Maruwa & Maruwa Malaysia. Explained to Mr Eric & Mr Takimoto that all the info need to put myself & Mr Arif in the loop to ensure that Maruwa Malaysia can execute on the claim and reply it by the required time.
2. The defect sample also need to be send to malaysia instead of sending to Japan. Will further discuss this with the Sales group on 20th Apr

Customer Visit Report

MM-IN-RD-9100-P06-04

Rev: 1

Customer : TA-I China		Prepared by : Siva		Date : 19/Apr/2012	Time : 2.30pm
Participant From Maruwa		Participant From Organizer		Report To	
1. Mr Ogawa	MMSB - MD	1. Mr Ming	Prod Manager	1. Mr. Anthony	EA
2. Mr Takimoto	Sales - Manager	2. Mr Guo	QC	2. Mr. Ogawa	MD
3. Mr Izumo	JP Substrate - M	3.		3. Mr. Seenii, Mr. Naga	GM
4. Mr Eric	Sales	4.		4. Mr. Sinna, Mr. Sukenari	Production
5. Mr Siva	MMSB Subs QA	5.		5. TOP Management	

Agenda

1. Meeting started of by discussing on the replacement for Non Rank Product. Total Quantity that is in TA-I warehouse is
Previous stock : 226Kpcs
Latest Incoming: 276Kpcs

Mr Ogawa instructed to return back the product and Maruwa will do the replacement end of May'12. TA-I group disagree with the proposed Maruwa to shipout if possible by end of April.

Reason gave is they expected order to increase from May'12 onwards and they would like to hit the market and they need to have the market.

Mr Ogawa will check on the stock status in Maruwa and feedback to TA-I on 23/04/12 PIC: Mr Ogawa

Their production status currently running on the minimal quantity and forecasted the market will improve from 2nd Quarter onwards. Their 1st quarter starts in Jan'12. Below table shows the order trend

Quarter	Month	Market Trend
1	Jan ~ Mar	Weak
2	Apr ~ Jun	Order improve
3	July ~ Sept	Order better then 2nd Quarter

Why the market is improving in 2nd quarter is due to

- Increase demand for smartphone
- Increase demand for LED
- Increase demand for tablet

The market for computer is still low and no sign of getting better

Meeting topic have been change to Quality discussion

2. Mr Guo requested Maruwa to produce product 874M with thickness of 0.5 instead of 0.47.

Maruwa feedback is producing product with 0.5mm thickness is possible but all other customers is requirement is 0.47mm. By changing it will create other control point and mix issues. We also explain that if TA-I insist to have this thickness product, we need to have a specific mould, new name and mould need to have notch in order not to mix with other 874M product.

For this request, there is no conclusion made since it involve cost of material & also mould, Maruwa will first submit the drawing with no review. ==> PIC: Mr Izumo Date: 24/04/12

Propose by Maruwa is (Not discussed during the meeting) that since the requirement is 0.5 ± 0.04 , and current product range is at $0.47 \pm$. We will be able to segregate the product which falls in upper limit after Main firing for TA-I. Need to know the current condition and later propose to TA-I on this trend

SPEC RANGE											
Current spec (0.47 ± 0.04)	0.4	0.44	0.45	0.5	0.5	0.5	0.5	0.5	0.51		
Propose spec (0.5 ± 0.04)				0.5	0.5	0.5	0.5	0.5	0.51	0.5	0.5

*** Area that being shaded will be propose for TA-I**

This is only proposal and will be decide base the management decision and also TA-I approval on the new cost for material & mould

3. Another QC member asked about Maruwa action for the crack issue and I have presented the improvement activity that we have done (Please refer to the attach file)

Upon competing the explanation, TA-I had a few question

i. Why Maruwa's action is taken at every area?

A: For substrate crack, this defect can't be eliminated but can be reduce and the occurrence can happen at every area. That why we are covering

ii. Is the cause of crack in process or shipment?

Ans: The main cause is from process. Shipment impact is very minimal

4. Mr Guo feedback that the chips that they produce from Maruwa's material shows unbalance and they also have issued a claim because printing, they found that the printing is uneven and this have cause their chip become uneven

After analysing the NG sample, the product was actually bumpy and we need to check whether this product is non gating product or not. product is 874M & 3080M

5. TA-I also requested Maruwa to change the outer packaging from cover type to normal carton box type (folding type) for BYA product. Maruwa will only carry out evaluation for inner tray to sponge type and will review back TA-I proposal on changing the carton box.

Meeting adjourned at 4.30pm

Conclusion & Opinion

1. The improvement activity that Maruwa taken for crack have also shown some impact in their claim trend and the current claim trend change from crack to other visual defects. The bumpy issue have been highlighted to Maruwa group in month of May'11 and Maruwa promise to come back with a solution but until to date, the isn't any feedback. Basically there are comparing our product with competitors. I have them to send back the previous report that Maruwa submitted for us to review.
