

TECHNODEX

PROGRAMME SCHEDULE FINANCIAL MODELING ANALYSIS USING EXCEL 15th & 16th May 2013 Venue – Avenia, Level 3, Armada Hotel, Petaling Jaya

Day 1 – Wednesday, 15th May 2013

- | | |
|-----------------|--|
| 8.30 am | - Registration |
| 9.00 am | - Introduction : Self & Participants |
| | - Assessment on participants of Excel knowledge |
| | - Training (Part 1 – 4) |
| | - Decision Support Process <ul style="list-style-type: none">○ Analyzing various types of data available○ Gathering Data○ Modelling Data○ Interpreting Data○ Sampling Data○ Storing and Retrieving Data in Excel |
| | - Aspects of Modelling <ul style="list-style-type: none">○ Identifying relationships graphically○ Correlation○ Fitting a “best-fit” curve in Excel |
| | - Piecewise Modelling <ul style="list-style-type: none">○ Locating ‘breakpoints’ in data○ Calculating CUSUM (Cumulative Summation)○ Identifying trends, cycles and noise○ Application of CUSUMs○ Linear and non linear models○ Regression Analysis |
| | - Prediction and Estimation <ul style="list-style-type: none">○ Calculating future values based on past and historic values |
| 10.30 am | - TEA BREAK |
| 10.45 am | Continue training |
| 12.30 pm | - LUNCH BREAK – COFFEE HOUSE, GROUND FLOOR |
| 1.30 pm | - Continue Training |
| 3.15 pm | - TEA BREAK |
| 3.30 pm | - Continue Training |
| 5.00 pm | - END |

Day 2 – Thursday, 16th May 2013

8.30 am - **Registration**

9.00 am - **Training**

- **Corporate Financial Analysis (Part 5 -9)**
 - Comparable company analysis
 - Liquidity of a company
 - Asset management and activity
 - Assessing profitability management
 - Market and valuation
- **Working with Excel Functions**
 - Looking up specific values from a database or table
 - Applying the various COUNT functions
 - Performing specific analysis of data with SUMIF, AVERAGE and COUNTIF
- **Application of Excel's Financial Functions**
 - Understanding Time Value of Money
 - Future Value (FV), Present Value (PV) and Net Present Value (NPV)
 - Internal Rate of Return (RR) and Multiple Internal Rate of Return (MIRR)
 - Using XNPV and XIRR
 - Loan calculations based on principal amount and interest rates
 - Cumulative principal and interest payments
- **Application of Excel's Advanced Features**
 - Performing a sensitivity "what-if" analysis using Goal Seek in Excel
 - Creating a one-input and two-input Data Tables for financial analysis
 - Consolidating data from multiple sheets and performing calculations automatically
 - Creating a drop-down list option within a single cell
- **Case Study Using Excel**

10.30 am - **TEA BREAK**

10.45 am Continue training

12.30 pm - **LUNCH BREAK – COFFEE HOUSE, GROUND FLOOR**

1.30 pm - Continue Training

3.15 pm - **TEA BREAK**

3.30 pm - Continue Training

5.00 pm - **END OF PROGRAMME**
